

ASSIGNMENT NO.2: Basic Data Retrieval using SQL

Q1) Create a database named CollegeDB and a table named Student. The table should contain the following columns: Column Name Data Type
StudentID StudentName INT VARCHAR(50) Age Course INT VARCHAR(30)
City Marks VARCHAR(30) INT Add a primary key on StudentID and insert at least 10 records.

ANS:

```
CREATE DATABASE CollegeDB;
```

```
USE CollegeDB;
```

```
CREATE TABLE Student (
```

```
    StudentID INT PRIMARY KEY,
```

```
    StudentName VARCHAR(50),
```

```
    Age INT,
```

```
    Course VARCHAR(30),
```

```
    City VARCHAR(30),
```

```
    Marks INT
```

```
);
```

```
INSERT INTO Student (StudentID, StudentName, Age, Course, City, Marks) VALUES
```

```
(1, 'Alice', 20, 'BSc', 'Mumbai', 85),
```

```
(2, 'Bob', 21, 'BCA', 'Pune', 78),
```

```
(3, 'Charlie', 19, 'BSc', 'Delhi', 92),
```

```
(4, 'Diana', 22, 'MCA', 'Mumbai', 88),
```

```
(5, 'Eve', 20, 'BCA', 'Nashik', 74),
```

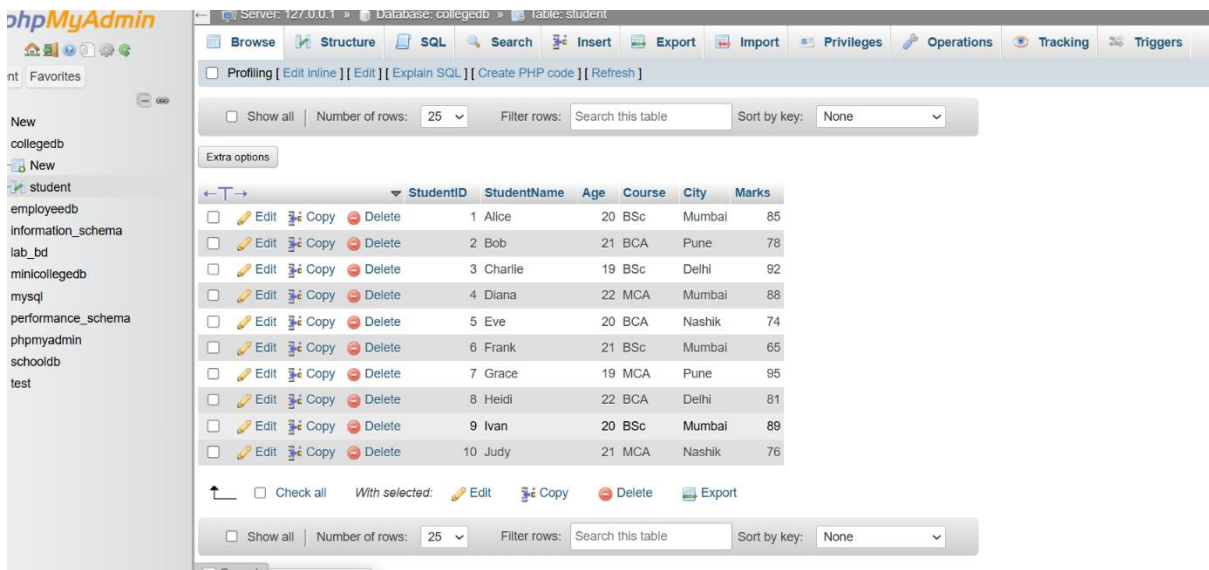

```
(6, 'Frank', 21, 'BSc', 'Mumbai', 65),
```

```
(7, 'Grace', 19, 'MCA', 'Pune', 95),
```

```
(8, 'Heidi', 22, 'BCA', 'Delhi', 81),
```

```
(9, 'Ivan', 20, 'BSc', 'Mumbai', 89),
```

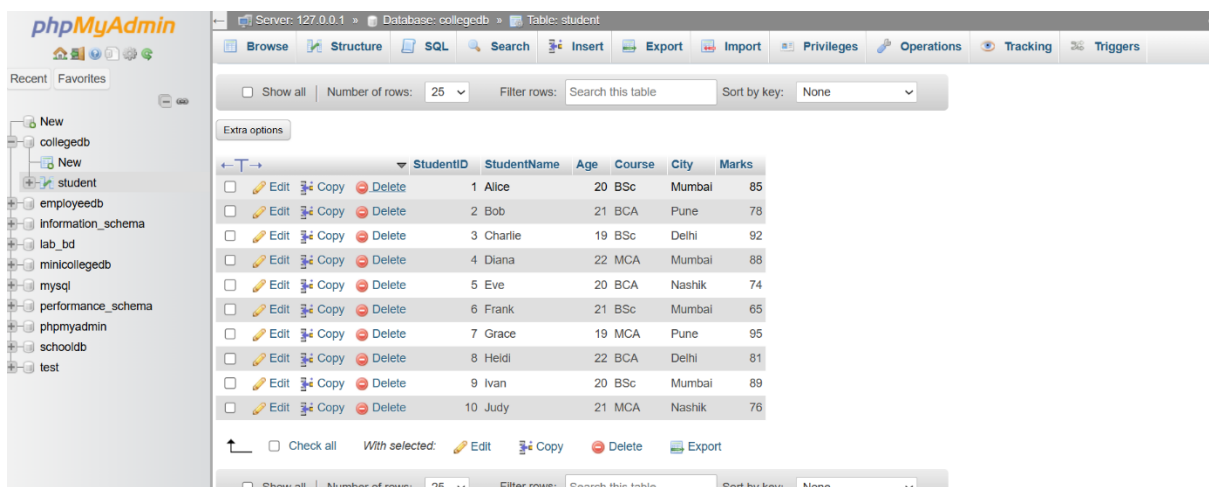

```
(10, 'Judy', 21, 'MCA', 'Nashik', 76);
```

Q2) Write a MySQL query to display all records from the Student table. The output should display all columns and all rows.

ANS:

SELECT * FROM student;

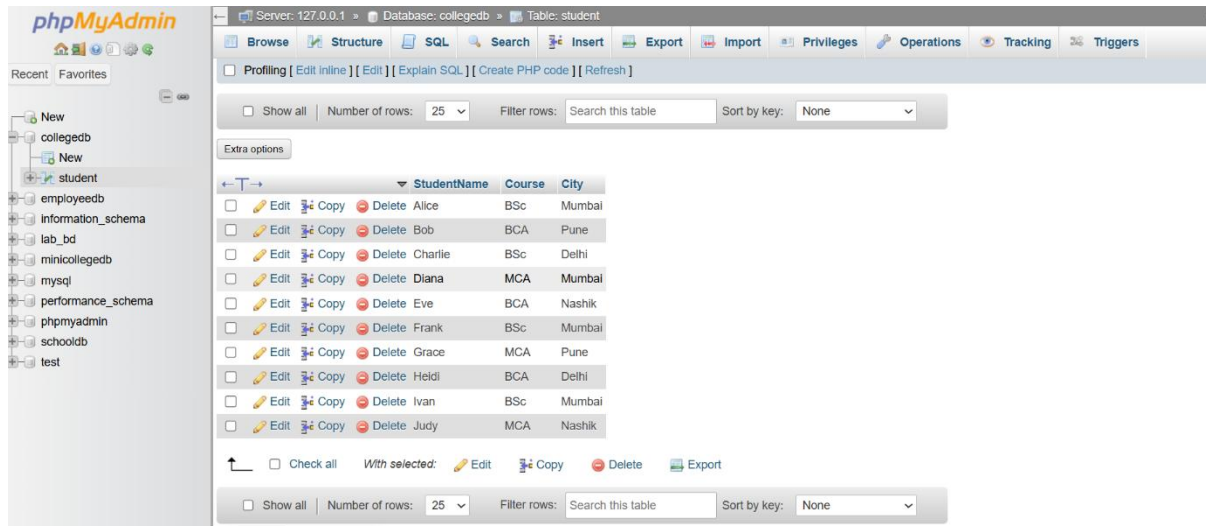

Q3) Write a MySQL query to display only the following columns: 1. StudentName 2. Course 3. City

ANS:

SELECT StudentName, Course, City

FROM student;

The screenshot shows the phpMyAdmin interface. On the left is the database navigation tree with 'collegedb' selected and 'student' highlighted. The main panel shows the 'Table: student' view. The 'Structure' tab is active, displaying the table's columns: StudentName, Course, and City. Below the column list, a table of data is shown with 10 rows. Each row includes checkboxes for Edit, Copy, and Delete actions. The data rows are:

StudentName	Course	City
Alice	BSc	Mumbai
Bob	BCA	Pune
Charlie	BSc	Delhi
Diana	MCA	Mumbai
Eve	BCA	Nashik
Frank	BSc	Mumbai
Grace	MCA	Pune
Heidi	BCA	Delhi
Ivan	BSc	Mumbai
Judy	MCA	Nashik

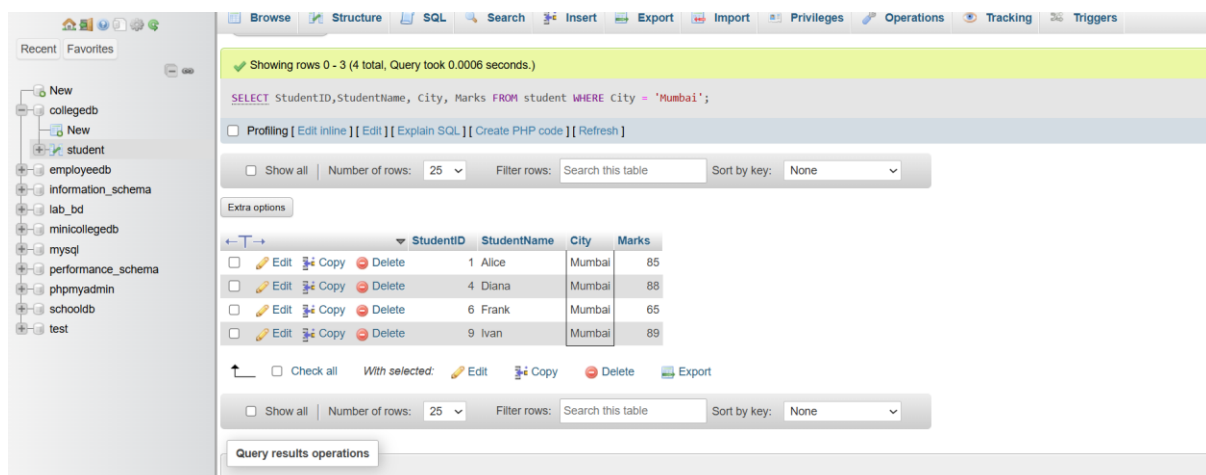

Q4) Write a MySQL query to display students who belong to the city Mumbai. The output should include: 1. StudentID 2. StudentName 3. City 4. Marks

ANS:

SELECT StudentID, StudentName, City, Marks

FROM student

WHERE City = 'Mumbai';

The screenshot shows the phpMyAdmin interface with a SQL query executed. The query is: `SELECT StudentID, StudentName, City, Marks FROM student WHERE City = 'Mumbai';`. The results are displayed in a table with 4 rows. The status bar indicates 'Showing rows 0 - 3 (4 total, Query took 0.0006 seconds.)'.

StudentID	StudentName	City	Marks
1	Alice	Mumbai	85
4	Diana	Mumbai	88
6	Frank	Mumbai	65
9	Ivan	Mumbai	89

Q5) Write a MySQL query to display students whose marks are greater than 80. The output should be sorted by marks in descending order.

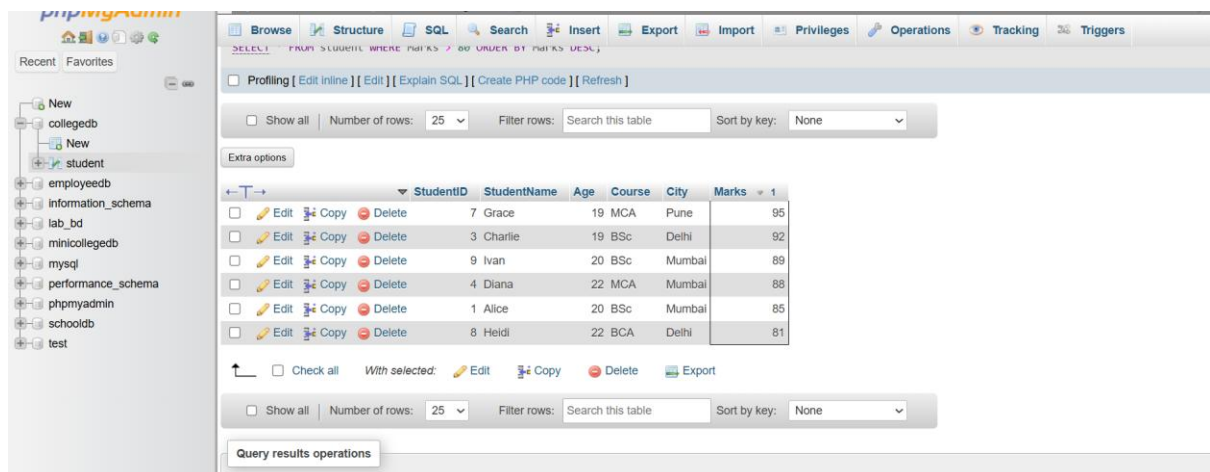

ANS:

SELECT *

FROM student

WHERE Marks > 80

ORDER BY Marks DESC;

The screenshot shows the phpMyAdmin interface. The SQL tab is active, displaying the query: `SELECT * FROM student WHERE Marks > 80 ORDER BY Marks DESC;`. The query has been executed successfully, and the results are shown in a table. The table has 6 columns: StudentID, StudentName, Age, Course, City, and Marks. There are 6 rows of data displayed, all with Marks greater than 80, sorted in descending order of Marks.

StudentID	StudentName	Age	Course	City	Marks
7	Grace	19	MCA	Pune	95
3	Charlie	19	BSc	Delhi	92
9	Ivan	20	BSc	Mumbai	89
4	Diana	22	MCA	Mumbai	88
1	Alice	20	BSc	Mumbai	85
8	Heidi	22	BCA	Delhi	81

Q6) Write a MySQL query to display the top 3 students based on marks. The query should: 1. Display StudentName and Marks. 2. Sort marks from highest to lowest. 3. Display only 3 records using LIMIT.

ANS:

SELECT StudentName, Marks

FROM student

ORDER BY Marks DESC

LIMIT 3;

phpMyAdmin
